

CSF's 8MS[®] Billing Analysis program identifies billing discrepancies by running an in-depth analysis on your Carrier invoices. The program interrogates each CDR (Call Detail Record) and uses LNP (Local Number Portability) data and your Carrier Rate Decks to help evaluate the accuracy of your toll-free traffic monthly invoices.

If you're not already using an automated billing reconciliation technology, then you're likely leaving money on the table.

While the idea isn't new, billing reconciliation is gaining traction amongst companies looking to leverage technology and also impact their bottom line.

Our 8MS Billing Analysis solution provides a few key benefits:

Never Overpay Again

With 8MS Billing Analysis, you can let the technology do all the hard work. Our tools match your carrier bill against the quoted price and provide supporting documentation to successfully dispute your invoices with your carriers.

If there's a discrepancy, your team gets alerted to take action on the invoice. That means no overpayments will ever slip through the cracks again.

Save Time With Automated Uploads

Think of the time your team will save when they no longer have to manually review every single bill, freeing up valuable resource hours.

8MS Billing Analysis quickly loads Call Detail Records and carrier invoices with little or no involvement by your team. The service feature proactively analyzes each bill and finds errors that can be successfully disputed, ultimately improving your bottom line.

Understand Your Data With Intelligent Reporting

An analysis of your invoice data is reported back to you, summarizing each type of invoice anomaly and providing insights into your larger traffic patterns.

This valuable information can be used to renegotiate contract terms, rank suppliers, improve processes and better understand traffic patterns.

Increase Your Margin & Start Saving Today

With the Billing Analysis tool, dollars to your bottom line will increase because you only pay for what you use!

We automate the analysis, look for billing anomalies, and provide you with a timely and well documented report that you can use to successfully help work towards correcting your invoice with your carrier provider.

In addition, we can provide new insights into your traffic patterns, giving you the tools and information to have productive discussions with your suppliers.

Recapture your margin and contact CSF to learn more about our new Billing Analysis Program, stand-alone service!

About 8MS Cloud

CSF's leading SaaS platform simplifies and automates toll-free number provisioning and complex routing with increased automation and a simple administrative interface. With 8MS Cloud, you can reserve, update, and activate toll-free numbers in bulk in the Somos SMS/800 database and major carrier networks. Use 8MS Cloud to optimize the routing of toll-free numbers based on geography and least cost, and quickly re-route them during an emergency. The platform also provides a turnkey solution for text enabling toll-free numbers from the same interface, without the need to establish separate relationships with texting providers. Visit www.8mscloud.com to learn more.
